

Listing of Claims

1. (Cancelled)
2. (Previously presented) The method of claim 5, wherein:
the conductivity is less than 80 micro mhos/cm.
3. (Previously presented) The method of claim 5, wherein:
the conductivity is less than 50 micro mhos/cm.
4. (Previously presented) The method of claim 5, wherein:
the conductivity is less than 30 micro mhos/cm.
5. (Currently amended) A method for preparing silica containing molecular sieves which may be mixed with an organic polymer to create a mixed matrix membrane, the method comprising:
washing silica containing molecular sieves with a basic water solution having a pH of at least 9; and
water washing the silica containing molecular sieves sufficiently to produce water washed molecular sieves which are substantially free of surface remnants, such that when the water washed molecular sieves are subjected to a Sieve Wash Conductivity Test, a wash filtrate is produced having a conductivity of less than 110 micro mhos/cm[[:]] .
~~washing the silica containing molecular sieves with a basic water solution having a pH of at least 9 prior to the water washing step.~~
6. (Original) The method of claim 5 wherein: the basic water solution has a pH of at least 11.

7. (Previously presented) The method of claim 5, wherein:
the water washing is performed continuously until the silica containing
molecular sieves are substantially free of the surface remnants.
8. (Previously presented) The method of claim 5, wherein:
the water washing is performed batch wise until the silica containing molecular
sieves are substantially free of the surface remnants.
9. (Previously presented) The method of claim 5, further comprising:
calcining the silica containing molecular sieves after the step of water washing
has produced sieves which are substantially free of surface remnants.
10. (Previously presented) The method of claim 5, further comprising:
silanating the water washed silica containing molecular sieves.
- 11 - 16. (Cancelled)
17. (Previously presented) The method of claim 24, wherein:
the wash filtrate has a conductivity of less than 80 micro mhos/cm.
18. (Previously presented) The method of claim 24, wherein:
the wash filtrate has a conductivity of less than 50 micro mhos/cm.
19. (Previously presented) The method of claim 24, wherein:
the wash filtrate has a conductivity of less than 30 micro mhos/cm.
- 20 - 23. (Cancelled)

24. (Currently amended) A method of making a mixed matrix membrane, the method comprising the steps of:
washing silica containing molecular sieves with a basic water solution having a pH of at least 9;
water washing the silica containing molecular sieves sufficiently to produce water washed molecular sieves which are substantially free of surface remnants, such that when the water washed molecular sieves are subjected to a Sieve Wash Conductivity Test, a wash filtrate is produced having a conductivity of less than 110 micro mhos/cm;
dispersing the water washed molecular sieves into a solvated organic polymer; and
allowing the organic polymer to dry thereby creating a mixed matrix membrane comprising an organic polymer with the water washed molecular sieves dispersed therein. ~~[[; and]]~~
~~washing the silica containing molecular sieves with a basic water solution having a pH of at least 9 prior to the water washing step,~~
25. (Previously presented) The method of claim 24, further comprising the step of calcining the water washed silica containing molecular sieves.
26. (Previously presented) The method of claim 24, further comprising the step of silanating the water washed silica containing molecular sieves.
